

Submission under CFR 1.114
Application No. 10/801,546
Attorney Docket No. 042122

AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior versions of claims in the application.

1. (Currently Amended): A fluorescent material comprising ~~either one or both of a perylene compound represented by formula (1) below and an anthanthrene compound represented by formula (101) below:~~

(in formula (1), two or more of R^{1-12} , each, have a structure represented by formula (2) below, with the rest being hydrogen),

(in formula (2), R^{13} and R^{14} are, independently from each other, an aromatic group that may be substituted, or an aliphatic group that may be substituted, wherein R^{13} and R^{14} may be bonded with

each other, directly or via a bonding group), and

(in formula (101), four of R¹⁰¹⁻¹¹², each, have a structure represented by formula (102) below, with the rest being hydrogen),

(in formula (102), R¹¹³ and R¹¹⁴ are, independently from each other, a phenyl or naphthyl group that has a substituent group selected from the class consisting of an aryl group, an alkoxy group, an aryloxy group, a dialkylamino group and a diarylamino group, and the substituent group may also be substituted, wherein R¹¹³ and R¹¹⁴ may be bonded with each other, directly or via a bonding group).

2. (Original): A fluorescent material according to claim 1, wherein two of said R¹⁻¹² has a

structure represented by formula (2), with the rest being hydrogen.

3. (Cancelled).

4. (Currently Amended): A fluorescent material according to claim 2, wherein said R^{13} and R^{14} are, independently from each other, a phenyl or naphthyl group that may be substituted.

5. (Previously Presented): A fluorescent material according to claim 4, wherein said phenyl group or naphthyl group, of R^{13} and R^{14} , has a substituent group selected from the class consisting of an alkyl group, an aryl group, an alkoxy group, an aryloxy group, a dialkylamino group and a diarylamino group, and the substituent group may also be substituted.

6. (Cancelled).

7. (Cancelled).

8. (Previously Presented): A fluorescent material according to claim 4 for use as an organic light-emitting layer forming material for an organic electroluminescent element.

9. (Original): A fluorescent material according to claim 8 for use as an organic light-emitting layer forming material in the capacity of a host or a guest for an organic electroluminescent element.

10. (Previously Presented): An organic electroluminescent element having an organic light-emitting layer between an anode and a cathode, said organic light-emitting layer comprising a fluorescent material according to one of claims 1, 2, 4 and 5.

11. (Original): An organic electroluminescent element having an organic light-emitting layer between an anode and a cathode, said organic light-emitting layer using a perylene compound represented by formula (1) below as a fluorescent material:

(in formula (1), two of R^{1-12} , each, have a structure represented by formula (2) below, with the rest being hydrogen),

(in formula (2), R^{13} and R^{14} are, independently from each other, an aromatic group that may be substituted, or an aliphatic group that may be substituted, wherein R^{13} and R^{14} may be bonded with each other, directly or via a bonding group).

12. (Original): An organic electroluminescent element according to claim 11, wherein said R^{13} and R^{14} are, independently from each other, a phenyl or naphthyl group that may be substituted.

13. (Original): An organic electroluminescent element according to claim 12, wherein, said phenyl group or naphthyl group has a substituent group selected from the class consisting of an alkyl group, an aryl group, an alkoxy group, an aryloxy group, a dialkylamino group and a diarylamino group, and the substituent group may also be substituted.

14. (Cancelled).

15. (Cancelled).

16. (Cancelled).

17. (Original): An organic electroluminescent element according to claim 10, wherein said fluorescent material is an organic light-emitting layer forming material in the capacity of a host or a guest.

18. (Currently Amended): An organic electroluminescent element according to one of claims 11 to [[16]] 13, wherein said fluorescent material is an organic light-emitting layer forming material in the capacity of a host or a guest.

19. (Currently Amended): An organic electroluminescent element according to claim 10, wherein said organic light-emitting layer comprises a mixture of said fluorescent material and an aromatic amine compound represented by formula (3) below as an organic light-emitting layer forming material:

(in formula (102), R^{113} and R^{114} are, independently from each other, an aromatic group that may be substituted, or an aliphatic group that may be substituted, wherein R^{113} and R^{114} may be bonded with

each other, directly or via a bonding group wherein Ar¹ is an aromatic group with a bonding valency of 2, 3 or 4 that may be substituted; R¹⁷ and R¹⁸ are, independently from each other, a monovalent aromatic group that may be substituted; and m is an integer of 2-4).

20. (Currently Amended): An organic electroluminescent element according to one of claims 11 to [[16]] 13, wherein said organic light-emitting layer comprises a mixture of said fluorescent material and an aromatic amine compound represented by formula (3) below as an organic light-emitting layer forming material:

(wherein Ar¹ is an aromatic group with a bonding valency of 2, 3 or 4 that may be substituted; R¹⁷ and R¹⁸ are, independently from each other, a monovalent aromatic group that may be substituted; and m is an integer of 2-4).

21. (Original): An organic electroluminescent element according to claim 19, wherein said aromatic amine compound represented by formula (3) is a tetra(diarylamino)-substituted pyrene represented by formula (4) below:

(wherein R^{21} and R^{22} are, independently from each other, a monovalent aromatic group).

22. (Original): An organic electroluminescent element according to claim 20, wherein said aromatic amine compound represented by formula (3) is a tetra(diarylamino)-substituted pyrene represented by formula (4) below:

(wherein R^{21} and R^{22} are, independently from each other, a monovalent aromatic group).

23. (Original): An organic electroluminescent element according to claim 10, wherein said organic light-emitting layer comprises, as an organic light-emitting layer forming material, a mixture of said fluorescent material and a hydroxyquinoline complex represented by formula (5) below:

(wherein R²³ is hydrogen or an alkyl group that may be substituted; and M is a metal having a valency of 3).

24. (Currently Amended): An organic electroluminescent element according to one of claims 11-[[16]] 13, wherein said organic light-emitting layer comprises, as an organic light-emitting layer forming material, a mixture of said fluorescent material and a hydroxyquinoline complex represented by formula (5) below:

(wherein **R²³** is hydrogen or an alkyl group that may be substituted; and **M** is a metal having a valency of 3).

25. (Original): An organic electroluminescent element according to claim 23, wherein said hydroxyquinoline complex is an aluminum hydroxyquinoline complex represented by formula (6) below:

26. (Original): An organic electroluminescent element according to claim 24, wherein said hydroxyquinoline complex is an aluminum hydroxyquinoline complex represented by formula (6) below:

27. (Original): An organic electroluminescent element according to claim 10, wherein said organic light-emitting layer consists of a single layer of a fluorescent material.

28. (Currently Amended): An organic electroluminescent element according to one of claims 11 to 13, wherein said organic light-emitting layer consists of a single layer of a fluorescent material.

29. (Original): An organic electroluminescent display using an organic electroluminescent element according to claim 10.

30. (Currently Amended): An organic electroluminescent display using an organic electroluminescent element according to one of claims 11 to 13.

31. (Original): An organic electroluminescent display using an organic electroluminescent element according to claim 18.

32. (Original): An organic electroluminescent display using an organic electroluminescent element according to claim 20.

33. (Original): An organic electroluminescent display using an organic electroluminescent element according to claim 22.

34. (Original): An organic electroluminescent display using an organic electroluminescent element according to claim 24.

35. (Original): An organic electroluminescent display using an organic electroluminescent element according to claim 26.

36. (Original): An organic electroluminescent display using an organic electroluminescent element according to claim 28.
